Upon further consideration, the suspension of May 29, 2003 is herein withdrawn in order to introduce a new ground of rejection.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 8 and 10-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dawson (First Meeting of the Who Alliance for the Global Elimination of Trachoma, Geneva, 30 June-1 July 1997).

Dawson suggests the desirability topical administration of azithromycin. Dawson also teaches that although a stable product must be developed, an ophthalmic ointment would be relatively simple to fabricate. The instant claims are directed to nothing more than administering azithromycin to an eye. There is no indication from the instant claims that a stable product has been developed. Further, to vary the concentration of an active ingredient in a pharmaceutical composition is within the ordinary skill in the art, well within standard experimentation. Therefore, the claimed methods are deemed prima facie obvious over Dawson.
